QlikView on Mobile - get in touch with your data

QlikView delivers a compelling, tablet-based business intelligence (BI) experience that puts you in touch with your data anywhere, anytime. We're talking about your data, delivered by the QlikView server, so you can see what's happening with your business as it happens. There's no learning curve. Just touch, pinch, zoom, and swipe to instantly access and analyse data—you know, that stuff that takes hours, weeks or months with traditional BI.

With QlikView on mobile, business users get the complete QlikView Business Discovery experience, including interactive analysis, beautiful visuals, and associative search. Unlike lightweight visualisation tools that just let you roam around limited views of data, QlikView on mobile lets you dig deep so you can make smarter, faster decisions and get as granular as you want. It's also enterprise-proven, with a browser-based approach that gives IT comprehensive security and manageability. With QlikView, there are no worries about the data breaches possible with app store-based deployments.
.
QlikView provides professionals on the go with the BI industry's most powerful and engaging mobile experience. It features a compelling browser-based user interface fuelled by the power of QlikView server to deliver unprecedented freedom to mobile workforces. Users can simply jump in and become instantly productive with interactive analysis, rich visualisation and associative search capabilities. QlikView delivers live data from any source, specific to user needs, anywhere and anytime decisions are made. As the only true business discovery solution on mobile, QlikView offers the consumer-like experience users seek, while providing IT the security and manageability it requires.

Take full advantage of tablets - Tablets are the ideal mobile BI form factor. They're portable, yet have rich, large displays and enough processing power to satisfy the requirements of demanding business users. QlikView on mobile takes full advantage of the large touch screen interface and offers an ideal way to benefit from business discovery applications on the go. It provides complete touch capabilities, including scrolling and selection in any list box, table, chart or graph, and the ability to cycle through charts, graphs and sheets. QlikView also supports native iPad capabilities like pinch to zoom, adjusting for the tablet's orientation, and bookmarking QlikView applications for direct access from the iPad desktop.

Access all your data - QlikView provides analysis and search across a complete set of up-to-date information. QlikView combines data from any number of sources with high performance, providing the fastest way to gain

insight into your business across functions and data silos. With QlikView, there are no static views or pre-defined calculations, allowing a virtually unlimited number of questions and follow-up questions to be asked.

One QlikView, any device – QlikView is the only solution to offer true business discovery in a cross-platform, browser based interface. This means that applications can be built once and accessed on any device, whether it's a desktop, laptop, tablet, or Smartphone. By taking a 'build once deploy anywhere' approach, companies can reduce the burden associated with maintaining multiple versions of applications required by native clients for specific platforms. And users benefit from having a single, consistent QlikView experience across devices.

Manageable and secure – QlikView on mobile benefits from QlikView's enterprise-proven server architecture. It gives organisations a unique combination of control at the centre and flexibility at the edges. Because management and security are server capabilities in QlikView, the same access to applications and data entitlements apply regardless of the device used to access applications. And with a browser-based solution, there's no dependency on third-party app stores or approval processes, reducing risk and keeping activity inside the firewall.
